OpenYAM ChArUco calibration board

DICT_5X5_100, 7 x 5 squares, square 29.97 mm, marker 21.98 mm (as printed at 100%, 300 dpi). Board 209.8 x 149.9 mm.

50 mm check: must measure exactly 50.0 mm (otherwise rescale, see README)

Print at 100% / Actual size (no 'fit to page'). Glue flat to stiff cardboard or foam board. Measure a square with calipers: if it is not the value above, pass --square-mm <measured> to calibrate_intrinsics.py. Matte paper avoids glare. Do not bend; keep the white border.
